#### TECHNICAL DATA

Structural Stone Products have been tested and meet or exceed ASTM Standards and building code requirements for Cast Stone. These include ASTM C1194-03, C666-03, C1195-03, C270, C979. Always research and conform to local building code requirements in your area.

#### MAINTENANCE & WARRANTY

Structural Stone Products carry a limited 50 year warranty when installed according to instructions provided by manufacturer. Detailed instructions available upon request. Our products are 100% Maintenance Free and weather naturally. We do not recommend applying cleaning chemicals such as brick cleaners, acids or other harsh chemicals to the stone. Doing so may result in void of warranty. A mild dish soap, water, and scrub brush may be used if to remove a stain or other debris from the stone if necessary.

#### INSTALLATION BASICS

- Secure using wall ties and weep holes just like brick according to required codes in your area. (Approx. 1 tie per 2 sq. ft.)
- Also like brick you must fill and compress the head joint.
- Stone should be set approx. 1/2" from the sub-straight.
- You may cut the stone if necessary to complete an area.
- It is recommended that you use a level or string a line to maintain straight clean lines.
- Break joints horizontally at least every 2'-3' to maintain a running staggered bond.
- Requires footers and ledger.

#### Cumberland LedgeStone only

Never lay your head joints higher than 5" or 2 brick tall.

#### Pilgrim Series only

Never have a vertical line longer than the largest stone (6 brick tall). Be sure to clean excess mortar with a marginal trowel and soft brush.

STRUCTURAL STONE PRODUCTS

[www.BrickThick.com](http://www.BrickThick.com)

Like Brick, BRICKTHICK™ is 3.5"-4" thick. This makes it a Full Bed Masonry Product installed using wall ties in the same manner brick is installed.

## BRICKTHICK™

is a remarkable patent pending product designed to change the face of manufactured stone products. It is manufactured in sizes that are equal to brick dimensions. This simplifies the installation in unison with brick and other masonry products. It is installed in the same manner as brick using the time proven weep hole water shed system for a beautiful, convenient, maintenance free stone product.

## Why BRICKTHICK™ ?

- Wide variation in sizes creates a highly skilled natural stone appearance.
- It's installed using a time proven weep hole system for superior water shed protection.
- Available in a variety of colors for convenience in design selection. These colors may also be blended to create your own customized color combination.
- It is dimensionally compatible with brick to easily allow for integration of brick and stone in unison, as well as other masonry products.
- 100% Maintenance Free.
- User friendly and easy to install.
- The beauty and elegance of stone always improves the value of your home or business.

## *Available Colors*

There are many different color selections available. These colors may also be blended to create your own personalized color combination. Our Pilgrim Series may be laid right out of the box, there is no need to mix different sizes when the pattern is already established. Also with the Pilgrim Series, there are two worked or chiseled sides of each stone to allow for an attractive finish on outside corners.

## *Cumberland Ledge stone*

Our newly added patent pending series has a drystacked stone appearance with all the same great qualities of BRICKTHICK™.

It has the much desired look of a rustic stacked stone in a full bed masonry product. Corners exist in 60% of the mix per pallet in the Cumberland Ledge stone BRICKTHICK™. Use corners at windows, arches, architectural breaks, and returns. Lay mortar in the pocket provided by the design to allow for a hidden mortar bed. This creates full bed masonry strength, water protection and the illusion of a Dry Stack Stone.
